<sup>\*\*</sup> These auto switches can be mounted with a tie-rod when auto switch mounting brackets are used. Refer to page 1691 for details.

# **Auto Switch Variations**

### **Auto Switch Variations 2**

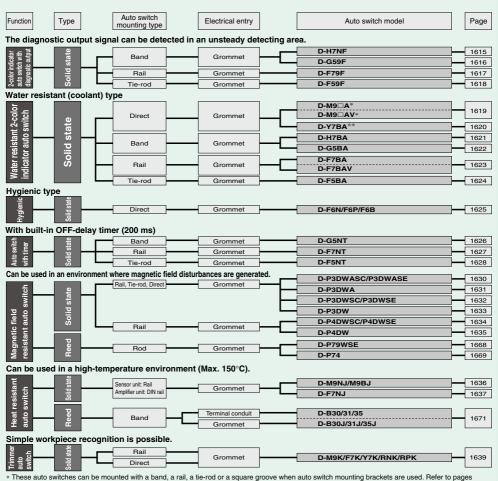

- \* These auto switches can be mounted with a band, a rail, a tie-rod or a square groove when auto switch mounting brackets are used. Refer to pages 1680, 1684, 1688 and 1696 to 1698 for details.
- \*\* These auto switches can be mounted with a tie-rod when auto switch mounting brackets are used. Refer to page 1691 for details.

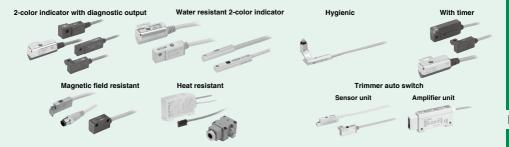

## 2-color indicator Easily identifiable, proper operating range Mounting positions can be set easily. Proper operating ranges can be set while watching the lights. Green Displacement of the detecting position can be visually checked. Trouble caused by incorrect detection can be prevented beforehand. Operating range OFF A green light lights up Red Green Red at the proper operating range. Proper operating range Even if 2-color indicator solid state auto switches are fixed at the proper operating range (the green light lights up), the operation may become unstable depending on the installation environment or magnetic field disturbance. (Magnetic body, external magnetic field, proximal installation of cylinders with built-in magnet and actuators, temperature change, other factors for magnetic force fluctuation during operation, etc.) Direct mounting Band mounting Rail mounting Tie-rod mounting

**Best Pneumatics** 

- These auto switches can be mounted with a band, a rail, a tie-rod or a square groove when auto switch mounting brackets are used. Refer to pages 1680, 1684, 1688 and 1696 to 1698 for details.
- \*\* These auto switches can be mounted with a tie-rod when auto switch mounting brackets are used. Refer to page 1691 for details.

# **Prior to Use**Auto Switches Common Specifications 1

Refer to the Auto Switch Precautions on pages 8 to 12 before using auto switches.

## **Auto Switches Common Specifications**

Туре	Reed auto switch	Solid state auto switch
Leakage current	None	3-wire: 100 µA or less, 2-wire: 0.8 mA or less
Operating time	1.2 ms	1ms or less *3)
Impact resistance	300 m/s <sup>2</sup>	1000 m/s <sup>2 *4)</sup>
Insulation resistance	50 $\mbox{M}\Omega$ or more (500 VDC measured via measured via	egohmmeter) (Between lead wire and case)
Withstand voltage	1500 VAC for 1 minute *1) (Between lead wire and case)	1000 VAC for 1 minute (Between lead wire and case)
Ambient temperature	-10 to	o 60°C
Enclosure	IEC60529 Sta	andard IP67 *2)

 \* 1) Electrical entry: Connector type (A73C/A80C/C73C/C80C): 1000 VAC/min. (Between lead wire and the case)

\* 4) 980 m/s2 for the trimmer type sensor section, 98 m/s2 for the amplifier section.

\* 2) The terminal conduit type (D-A3/A3□A/A3□C/G39/G39A/G39C/K39/K39A/K39C), DIN terminal type (D-A44/A44A/A44C) and heat resistant auto switch (D-F7NJ) conform to IEC60529 Standard IP63.

The trimmer type amplifier section (D-R□K) conforms to IP40.

- \* 3) Excluding the solid state auto switches with a timer (G5NT/F7NT/F5NT types) and magnetic field resistant 2-color indicator solid state auto switch (D-P3DW□/P4DW).
  - The operating time for D-J51 is 2 ms or less and for D-P3DW□/P4DW are 40 ms or less.

# **Prior to Use**Auto Switches Common Specifications 2

Refer to the Auto Switch Precautions on pages 8 to 12 before using auto switches.

Term	Meaning
Hysteresis	A deviation amount between the ON position and OFF position caused by auto switch characteristics (difference in sensitivity between ON and OFF).  When the switch is turned ON once and the switch (or piston) is moved in the opposite direction, a symptom occurs that the position where the switch operating position. This deviation amount is called "hysteresis".  Note) Hysteresis may fluctuate due to the operating environment. Please contact SMC if hysteresis causes an operational problem.
Most sensitive position	A position (sensor layout position) where the sensitivity is highest on the detection surface of the auto switch enclosure. When the center of the magnet is aligned with this position, this becomes almost the center of the operating range and stable operation can be obtained.
Programmable Logic Controller (PLC)	One of elements making up the sequence control.  The PLC is so designed that it receives signals, such as auto switch output and outputs them to other devices so as to perform the electrical control according to the preset program.
Operating temperature range	A temperature range, in which the auto switch can be used.  If significant temperature change or freezing occurs even in this temperature range, this may cause the auto switch to malfunction.
Operating voltage	A voltage, at which the auto switch can be used.  The operating voltage is indicated using generally used voltage (24 VDC or 100 VAC, etc.).  For 2-wire type, the operating voltage has the same meaning as the power supply voltage or load voltage.
Operating current range	A range of the current value that can be flowed to the output of the auto switch.  If the operating current is lower than this range, the auto switch does not operate correctly. Conversely, if the operating current is higher than this range, this may cause the auto switch to break.
Current consumption	This current value is necessary for the 3-wire type auto switch to operate the circuit through the power cable. For 2-wire type, as the current consumption is a part of the load current, it is not defined.
Insulation resistance	A resistance between the electric circuit and enclosure. Unless otherwise described particularly, 50 M $\Omega$ (Min) is used for auto switch.
Magnetic field resistant auto switch	An auto switch, for which measures against effects arising from external (welding) magnetic field generated in the spot welding process, etc. are taken.  The solid state auto switch functions as it detects the frequency of the applied magnetic field. If the external magnetic field (AC) is applied, the last signal is retained not to be affected by the external magnetic field. This system can be used by the cylinder with normal magnetic force.  The reed auto switch built-in a magnetic field shielded sensor with a low sensitivity to make the effect of the external magnetic field (DC or AC magnetic field) insusceptible. Therefore, a dedicated cylinder built-in the strong magnet needs to be selected and there is also an operable range (conditions).
Impact resistance value	A minimum acceleration that may cause the auto switch to malfunction or break when the standard impact is applied.
Water-resistant type auto switch	A model, long-term water resistance of which is improved by taking structural measures for the general (general purpose) product.
Withstand voltage	A tolerance dose when the voltage is applied to the portion between the electrical circuit and enclosure.  The withstand voltage shows a strength level of the product against the voltage. If a voltage exceeding the withstand voltage is applied, this may cause the product to break. (The voltage described here is different from the power supply voltage necessary to operate the product.)
Proper mounting position	A dimension that shows the mounting position when the position is detected at the stroke end of the cylinder. As this position is set, the maximum sensitivity position is aligned with the center of the magnet. However, make the adjustment with the actual machine by considering the characteristic difference during actual setting. When an adjustment allowance is needed for the detection before the stroke, set a value with an adjustment allowance added to the proper mounting position.
Applicable load	A device that is assumed as a target load of the auto switch.
Operating time	A period of time until the auto switch output becomes stable after the magnetic force to operate the auto switch has been received.
Operating range	An auto switch operating range in response to the cylinder piston movement (ON length in response to the stroke). The operating range is determined by the magnetic force of the magnet (range, in which the magnetic force acts) and switch sensitivity. So, the operating range may vary as these conditions are changed by the ambient environment, etc. The operating range in the standard status (normal temperature, single cylinder, magnetic force, and sensitivity, etc.) is described in the catalog.

# **Prior to Use Auto Switches Common Specifications 3**

Refer to the Auto Switch Precautions on pages 8 to 12 before using auto switches.

Term	Meaning
Minimum Stroke for Auto Switch Mounting	A minimum stroke value of the auto switch that can be mounted on the cylinder. The minimum stroke is determined by the specification limit (auto switch operation or position setting ability, etc.) and physical limit (mechanical interference associated with the auto switch mounting).  Note that the catalog shows the value assuming that the position detection is performed at the stroke end and this value does not consider the adjustment allowance. When an adjustment allowance is needed, such as detection before the stroke, a value is set that this adjustment allowance is added to the minimum stroke.
Internal voltage drop	A voltage that is applied to the portion between the COM and signal line when the auto switch is ON. As only a value that the internal voltage drop is subtracted from the power supply voltage is applied to the input side of the PLC, the detection fault (incorrect input) may occur if this value is lower than the minimum operating voltage. So, take great care when selecting a device.
2-Color Indicator	As the end part of the auto switch operating range (boundary between ON and OFF) is an area where is susceptible to the external disturbance or stroke change during cylinder operation, this function is intended to quickly and properly make the setting at the center of the operating range where the stable operation can be obtained by changing the operation indication color of the auto switch.
Load	A device that is connected to the output of the auto switch so as to do any work is called "load".  For example, the load is a relay or PLC, etc.  To check the operation of the auto switch, a device equivalent to the load (such as resistor, etc.) is connected.
Load current	A current that flows to the load when the ON-OFF output is ON.
Enclosure	A class of protection against solid or water entry of the electrical machinery and apparatus specified in IEC60529.  IP— Second characteristic numeral  First Characteristics: Degrees of protection against solid foreign objects  Non-protected Protected against solid foreign objects of 50 mm ø and greater Protected against solid foreign objects of 12 mm ø and greater Protected against solid foreign objects of 2.5 mm ø and greater Protected against solid foreign objects of 1.0 mm ø and greater Dust-protected Dusttight  Second Characteristics: Degrees of protection against water Non-protected Protected against vertically falling water drops Protected against vertically falling water drops Protected against vertically falling water drops when enclosure tilted up to 15° Protected against rainfall when enclosure tilted up to 60° Protected against water jets Protected against water jets Protected against water jets Protected against the effects of temporary immersion in water Protected against the effects of continuous immersion in water Example) In the case of stipulated as IP65, we can know the degrees of protection is dustright and water jet-proof on the grounds that the first characteristic numeral is 5 respectively, that gives it will not be adversely affected by direct water jets from any direction.
Solid state auto switch	A switch that detects the magnetic field by the MR element and incorporates the judgement circuit to turn ON or OFF the output regardless of the contact or non-contact of the mechanical contact like transistor (non-contact part).
Leak current	A current that flows to operate the internal circuit when the ON-OFF output is OFF. In particular, if this leak current exceeds the detection current in the 2-wire type auto switch or PLC, this may cause reset fault. So, take great care when selecting a device.
Reed auto switch	A switch that uses the reed switch to detect the magnetic field and turn ON or OFF the output by the contact or non-contact of the mechanical contact (contact part is provided like relay or limit switch).
Induction load	A load that has the coil. The connection target of the auto switch is a relay.
Recommended lead wire bending radius	A minimum bending radius (reference value) of the lead wire when the lead wire is secured and constructed (oscillation or rotation is not considered).  (As the temperature or current value conforms to the auto switch specifications, this lead wire bending radius differs from the value disclosed by the electric wire manufacturer.)
Electrical entry	A structure, in which the lead wire of the auto switch is taken out in the horizontal direction when the cylinder is laid out horizontally (cylinder rod is horizontal), is called "in-line entry". A structure, in which the lead wire is taken out in a direction perpendicular to the cylinder axis center, is called "perpendicular entry".

### Contact Protection Box/CD-P11, CD-P12

#### <Applicable switch models>

D-A7/A8, D-A7□H/A80H, D-A73C, A80C, D-C7/C8, D-C73C/C80C, D-E7□A, E80A, D-Z7/Z8, D-9/9□A, D-A9/A9□V, D-A79W

The auto switches above do not have a built-in contact protection circuit.

A contact protection box is not required for solid state auto switches due to their construction.

- 1. Where the operation load is an inductive load.
- 2. Where the wiring length to load is greater than 5 m.
- 3. Where the load voltage is 100/200 VAC.

Therefore, use a contact protection box with the switch for any of the above cases:

The contact life may be shortened (due to permanent energizing conditions.) D-A72(H) must be used with the contact protection box regardless of load types and lead wire length since it is greatly affected by loads. (Where the load voltage is 110 VAC)

When the load voltage is increased by more than 10% to the rating of applicable auto switches (except D-A73C/A80C/C73C/C80C/90/97/A79W) above, use a contact protection box (CD-P11) to reduce the upper limit of the load current by 10% so that it can be set within the range of the load current range, 110 VAC.

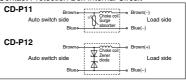

Even for the built-in contact protection circuit type (D-A34[A][C], DA44[A][C], D-A54[A64, D-A59W, D-B59W), use the contact protection box when the wiring length to load is very long (over 30 m) and PLC (Programmable Logic Controller) with a large inrush current is used.

#### Contact Protection Box Specifications

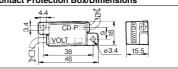

Contact Pro	Diection E	oux Speci	incations	
Part no.	CD-	P11	CD-P12	
Load voltage	100 VAC or less	200 VAC	24 VDC	
Max. load current	25 mA	12.5 mA	50 mA	-

\*Lead wire length — Auto switch connection side 0.5 m Load connection side 0.5 m

#### Contact Protection Box Internal Circuit

### Contact Protection Box/Dimensions

#### **Contact Protection Box Connection**

To connect a switch unit to a contact protection box, connect the lead wire from the side of the contact protection box marked SWITCH to the lead wire coming out of the switch unit. Keep the switch as close as possible to the contact protection box, with a lead wire length of no more than 1 meter.

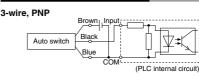

# **Prior to Use Auto Switch Connection and Example**

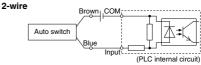

## Sink Input Specifications

# 3-wire, NPN Brown Input Auto switch (PLC internal circuit)

# 2-wire Brown Input; Auto switch (PLC internal circuit)

### Source Input Specifications

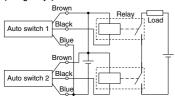

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

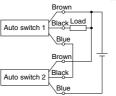

# Example of AND (Series) and OR (Parallel) Connection

When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid. Depending on the operating environment, the product may not operate properly

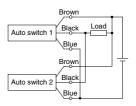

#### 3-wire AND connection for NPN output (Using relays)

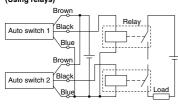

## (Performed with auto switches only)

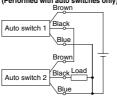

### 3-wire OR connection for NPN output

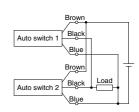

#### 3-wire AND connection for PNP output (Using relays)

## (Performed with auto switches only)

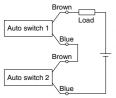

#### 3-wire OR connection for PNP output

(Reed)

#### 2-wire AND connection

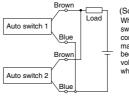

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with load voltage less than 20V cannot be used.

Load voltage at ON = Power supply voltage Residual voltage x 2 pcs. = 24 V - 4 V x 2 pcs.

Example: Power supply is 24 VDC Internal voltage drop in auto switch is 4 V.

#### 2-wire OR connection

(Solid state) When two auto switches are connected in parallel. malfunction may occur because the load voltage will increase when in the OFF state.

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance = 1 mA x 2 pcs. x 3 kΩ

Example: Load impedance is 3 kΩ Leakage current from auto switch is 1 mA.

SMC

Because there is no current leakage, the load voltage will not increase when turned OFF However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to

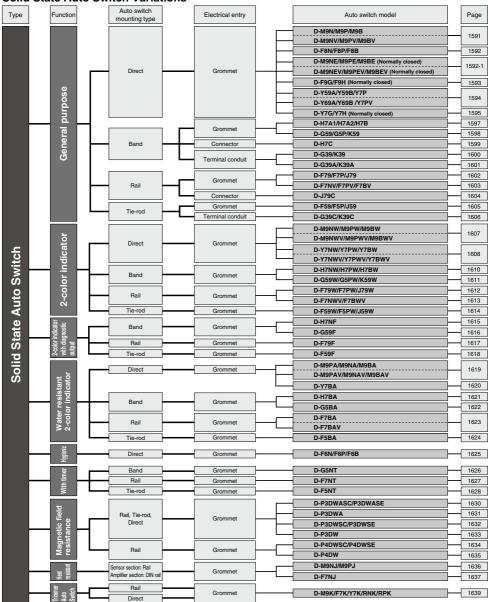

the auto switches.

# **Solid State Auto Switches**

## **Dimensions**

(mm)

# Solid State Auto Switch Rail Mounting Type **D-J79C**

Refer to SMC website for the details of the products conforming to the international standards.

#### Connector

#### **⚠** Caution

#### **Precautions**

- Confirm that the connector is appropriately tightened. If tightened insufficiently, the waterproof performance will deteriorate.
- 2. Refer to page 1679 for the details.

Lead wires with a connector indication

Part No. of Lead Wires with Connectors

(Applicable off)	(Applicable of type)

### **Magnetic Field Resistant 2-Color Indicator** Solid State Auto Switch

D-P3DWASC/D-P3DWASE ( € c SN us

(Electrical Entry: Pre-wired connector)

- It is possible to use in an environment which generates a magnetic field disturbance (AC magnetic field).
- The proper operating range can be determined by the color of the light.  $(Red \rightarrow Green \leftarrow Red)$

### **∆**Caution

### **Precautions**

For single-phase AC welding machines. If it is used for current inverter welders (including rectifying type) and condenser type welders, the magnetic field resistance is reduced. Please contact SMC regarding the performance.

### Magnetic Field Resistance

If the current of the AC welding machine is 16000 A or lower, the auto switch can be used, even if the distance between the welding conductor (gun cable) and the cylinder/actuator or auto switch is 0 mm.

Please contact SMC when the AC welding current exceeds 16000 A

## **Heat Resistant 2-Color Indicator Solid State Auto Switch: Direct Mounting Type**

D-M9NJ/D-M9PJ

Refer to SMC website for the details of the products conforming to the

international standards.

#### Grommet

 Improved heat resistant type The proper operating range can be determined by the color of the light.  $(Red \rightarrow Green \leftarrow Red)$ 

### ∧Caution

#### **Precautions**

This auto switch can be mounted on the cylinder with heat resistant auto switch (-XB14) and is not applicable to the heat resistant cylinder (-XB6) since a magnet is not built in it.

Do not disconnect the cable between the sensor and amplifier by the customer.

Even when the sensor and amplifier are connected again, a contact resistance is produced, causing the auto switch to malfunction. Additionally, the sensor and amplifier are paired and they do not operate correctly in different combinations.

### **Auto Switch Specifications**

PLC: Programmable Logic Controller D-M9NJ/D-M9PJ (With indicator light) Auto switch model D-M9NJ D-M9PJ Output type NPN PNP Power supply voltage 20 to 26 VDC 25 mA or less Current consumption Load voltage 28 VDC or less Load current 40 mA or less Internal voltage drop 0.8 V or less Leakage current 100 μA at 24 VDC Operating range Red LED illuminates. # Made to Order Specifications: Solid State Auto Switch -50: Without Indicator Light (Dark room) Specifications -61: Oilproof Flexible Heavy-duty Cord Specifications

2 Without Indicator Light (for dark room specifications)

-50

Possible to use under the environment which hates a light.

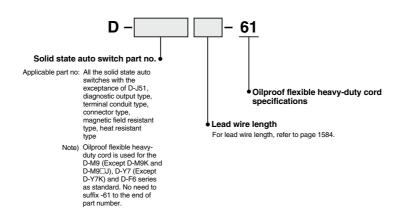

Dimensions and specifications are common as standard products with the exception of no indicator light.

### 3 Oilproof Flexible Heavy-duty Cord Specifications

Symbol -61

This is the product which uses a heavy-duty cord having flexible characteristics 5 times (SMC comparison) as strong as oilproof heavy-duty cord used in the standard products.

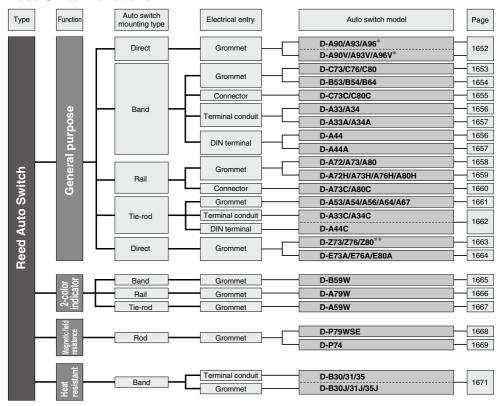

Dimensions are identical with D-F5 type, G5 type, J59 type, K59 type. Lead wire diameter is changed from ø4 to ø3.4. In other series products, it is common as standard product's specifications.

### **Reed Auto Switches**

General Purpose Type, 2-Color Indicator

### **Reed Switch Variations**

<sup>\*</sup> Auto switches with an asterisk (\*) can be mounted on a band (excluding D-A9□V), rail, tie-rod or square groove with an auto switch mounting bracket. Refer to pages 1680, 1684, 1688 and 1696 to 1698 for details.

<sup>\*\*</sup> This auto switch can be mounted by tie-rod with using auto switch mounting bracket. For details, refer to page 1691.

### **Reed Auto Switch Direct Mounting Type** D-A90(V)/D-A93(V)/D-A96(V) ( €

### Grommet D-A93 D-A90 (V) D-A93V D-A96 (V)

### **Precautions**

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

# Heat Resistant Reed Auto Switch D-B30(J)/31(J)/35(J)

( (

Can be used outdoors or under high temperature (Max. 120°C). Wide operating range (double that of other SMC products) enables stable position detection.

High temperature environment such as places around ignited gas outlet or furnace

Outdoor plants and environment with high temperature and humidity

Environment for steam cleaning or high temperature sterilization

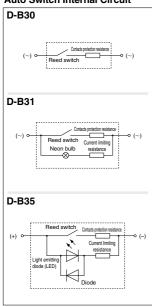

Applications requiring wide operating range such as clamping of elastic work pieces

Use of metal case and heat resistant materials.

The construction prevents influence of external environment by sealing the auto switch internal parts to improve heat resistance.

The wide operating range allows easy position setting and reduces influence of the work piece position changes.

# **D-B3** Series Specific Product Precautions

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 8 to 12 for Auto Switch Precautions.

# **∧** Caution

# 1. Use the reed switch within the operating range.

Take precautions about the ambient temperature because using the reed switch beyond the operating range may affect its internal electronic parts and sealing construction, causing abnormalities to the service life of the contact, as well as operation and waterproof performance of the switch.

Also, the maximum temperature of the environment where the switch is used must be fully understood before operation is started because the temperature of the environment where the auto switch is installed may experience some changes after operation is started due to factors other than air temperature such as influence of radiation heat from the heat source, air circulation or heat conduction.

# 2. Take precautions about the environment where the auto switch is installed.

If conditions (water splashes, time, temperature) beyond the normal ranges can be applied to the auto switch, use the auto switch in an environment where it will not be directly exposed to water splashes at a high temperature by installing a cover to protect the entire auto switch, as long as it is possible. The grommet type auto switch has a construction that will protect its internal parts against water splashes at the normal temperature. However, if the conditions (water splashes, time, temperature) exceed the normal ranges, they may adversely affect the auto switch internal insulation performance.

Also, confirm the applicability of the auto switch in the environment because extreme heat cycles or a long-term high humidity may cause functional deterioration of the auto switch protection construction.

In principle, the terminal conduit type must be used in an environment with no exposure to humidity or water because at high temperatures, it may become impossible to achieve sufficient waterproof effect due to deformation of lead wire sealant depending on the heat resistance of the lead wire and cable clamp.

#### 3. Visibility of an indicator light

Because the auto switch uses light emitting diodes and neon bulbs for display, continuous operation at a high temperature may cause changes in characteristics of the entire display circuit. Also, the transparency of the display window on the body may change depending on the characteristics of the resin.

Because of the above factors, lighting under high temperature may become dark, causing decline of visibility.

However, there could be no problem in output of the signal itself and its safety owing to adoption of the OFF-state lighting system.

#### 4. Take precautions about leakage current.

According to the heat resistant characteristics of its parts, the auto switch adopts the OFF-state lighting system (the indicator light lights up when the reed switch contact is open and goes off when the reed switch contact is closed).

Since the current for indicator lighting is running when the auto switch is off, confirm the allowable leakage current of PLC etc. before selecting the model.

If the leakage current of the indicator light becomes a problem for the PLC operation, select a model without an indicator light.

# 5. Keep the lead wire length as short as possi-

If a long lead wire is used because of the conditions of the plant or equipment where the switch is installed, malfunction in the reed switch reset operation may occur due to premature damage to the contact surface caused by the inrush current resulting from the line flotation capacity and influence of the electric field created by the power line near the wiring.

Therefore, the maximum wiring length should be kept at 100 m or less

Avoid wiring in proximity with the power line. Also, if the length of wiring in use is extremely long (30 m or longer), schedule replacement in periodical maintenance.

The basic guidelines for replacement are a total wiring length of 100 m between the load and the auto switch and 1 million cycles of operation (at  $120^{\circ}C$ , 100 VAC PLC load).

#### Install the auto switch at the center of the operating range.

The operation range of the auto switch is set at approximately double that of the standard type in consideration of the mounting error when the detection position is set. However, this range is subject to change with the temperature. Although the variation in the operating range differs with the cylinder on which the auto switch is mounted, a temperature change of 100°C will roughly result in the maximum of 20% reduction in the overall operation range.

(Approximately 2 mm variation at the position where the auto switch usually turns on)

Therefore, install the auto switch at the center of the operating range (stable range), while understanding the possible change in the operating range and considering the stability of the auto switch operation.

(Avoid installation of the auto switch at the boundary where the auto switch turns on or off.)

#### 7. Selection of applicable cylinders

The auto switch should be mounted on special cylinders (-X1184 series) because it is operated by magnets using heat resistant material.

Consult SMC in advance for special applications in which current cylinder cannot be used because, depending on the operating environment, it is possible that special measures should be taken or even the cylinder cannot be adapted.

#### 8. Maintenance

After the auto switch is installed under high temperature, apply additional tightening peiodically to the auto switch mounting band. The rubber lining of the auto switch mounting band may need some time to adapt to the environment because of temperature chages in the installation environment. Perform additional tightening at a tightening torque of 2 to 3 N·m while carefully applying equal torque to both lifting screws.

#### 9. Product upgrades

The product is subject to change without prior notice due to upgrades.
